HELLO!

We are AMEX
Analytics

American Express

Amex, is an American multinational financial services corporation which is best known for its charge card, credit card and traveler's cheque businesses. It is recognised for being “elite” and card has gathered prestige.

Understanding the Consumer

**Who are the millennials and what do
they want?**

Who Are Millennials?

What Millennials Value

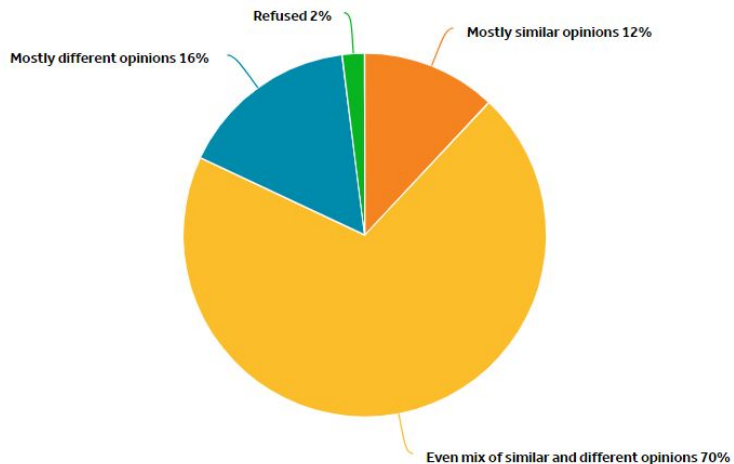

Millennials Look to their **Network** for answers

- Gen Y is well-acquainted with the **power of word of mouth**.
- They believe and often rely upon what their friends and family have to say.
- If they are extremely happy or disappointed in some service or product, they want the company as well as their consumers to know.
- **“Eight out of 10 millennials never buy anything without first reading a review, a study has found.”** - <https://www.independent.co.uk>

Millennials encounter a wide mix of opinions in social media

Question: Choose the statement that best describes you, even if it is not exactly right. Would you say that the opinions you see in your social media feeds are mostly similar to my own, an even mix of similar and different to my own, or mostly different than my own?

Response	Percent of Millennials
Mostly similar opinions	12%
Even mix of similar and different opinions	70%
Mostly different opinions	16%
Refused	2%

What do we have in Store?

Review Analysis

We wish to perform a rigorous segregation of reviews into being positive or negative by using selenium in order to scrape relevant tweets and consequently apply sentiment analysis to derive the **overall opinion of the respective consumer**.

How does it help?

We are able to extract the tweets in accordance to the input query, be it 'visa', 'mastercard', or 'amex'.

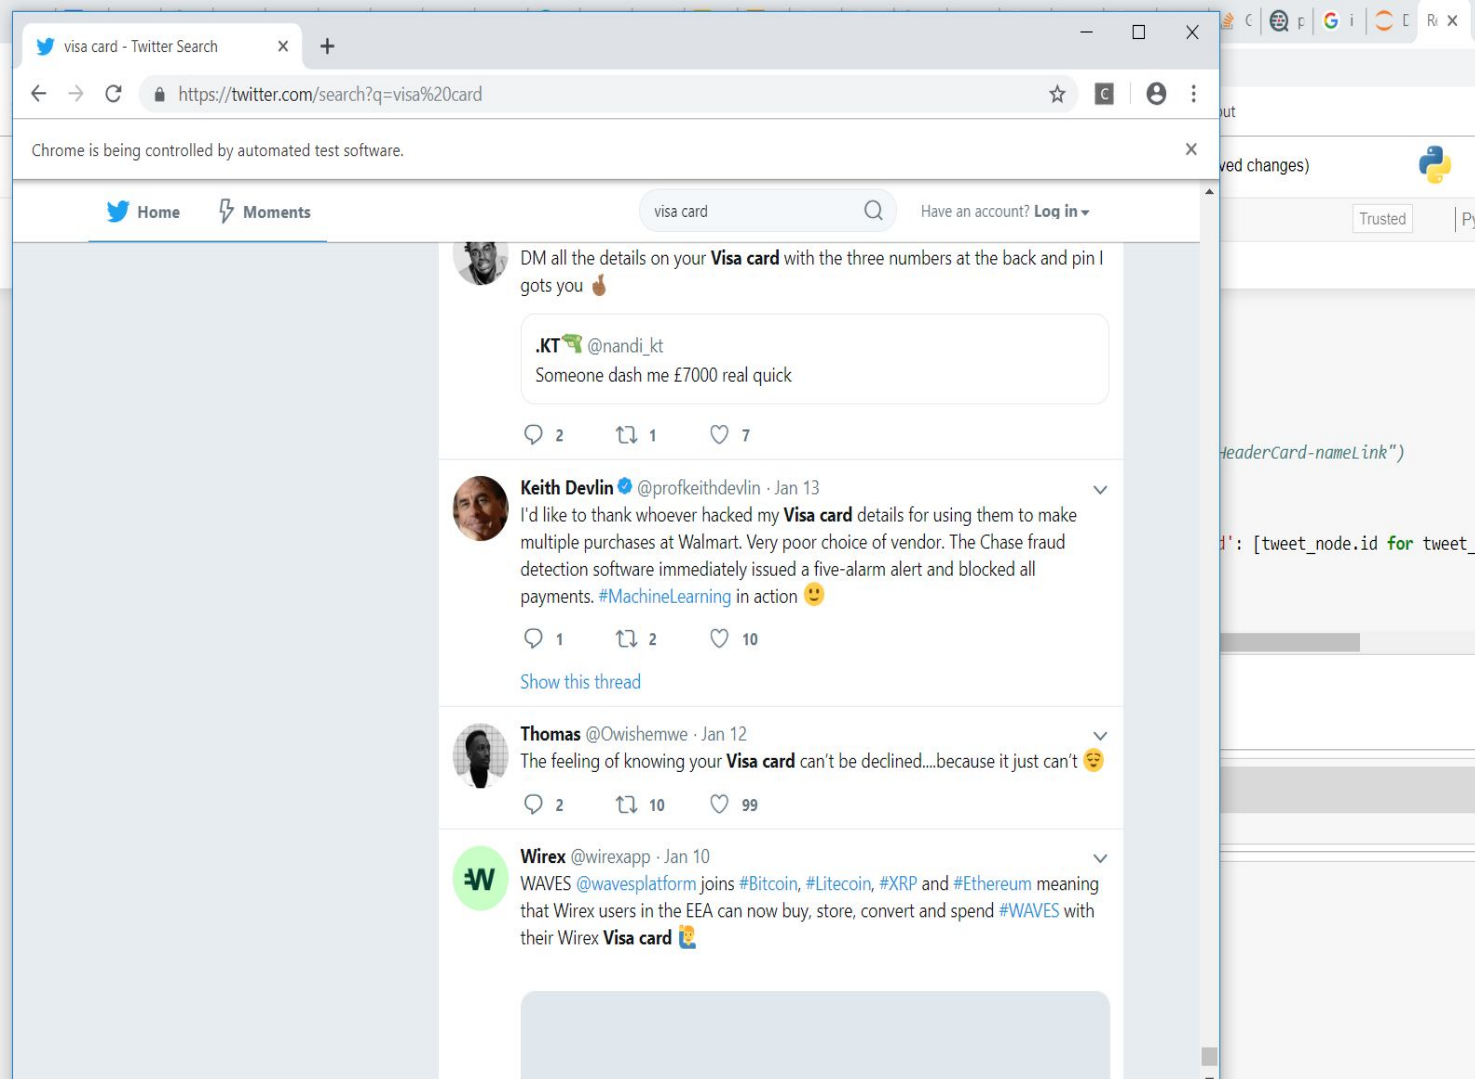

By monitoring competitive company reviews, we can obtain the lot of **satisfied/dissatisfied consumers** and strategise.

The sentiment analysis model classifies the tweets as being positive/negative with an **accuracy of 93%**

Vulnerable Consumers: The consumers that have recently faced issues with competitor companies form a target consumer-base for us and the ones giving negative reviews about AMEX.

SCRAPE

We obtain the relevant tweets for the search query 'visa card', scrape the data and store it in a dataframe.

The screenshot shows a web browser window with the address bar displaying 'https://twitter.com/search?q=visa%20card'. The page title is 'visa card - Twitter Search'. A notification at the top states 'Chrome is being controlled by automated test software.' The Twitter interface shows the search results for 'visa card'. The top navigation bar includes 'Home' and 'Moments' tabs. The search bar contains 'visa card' and a search icon. The results show several tweets:

- A tweet from an unnamed user: 'DM all the details on your **Visa card** with the three numbers at the back and pin I gots you 🍌'. Below it is a reply from '@nandi_kt': 'Someone dash me £7000 real quick'. This tweet has 2 replies, 1 retweet, and 7 likes.
- A tweet from Keith Devlin (@profkeithdevlin) dated Jan 13: 'I'd like to thank whoever hacked my **Visa card** details for using them to make multiple purchases at Walmart. Very poor choice of vendor. The Chase fraud detection software immediately issued a five-alarm alert and blocked all payments. #MachineLearning in action 😊'. This tweet has 1 reply, 2 retweets, and 10 likes. A link 'Show this thread' is visible below the tweet.
- A tweet from Thomas (@Owishemwe) dated Jan 12: 'The feeling of knowing your **Visa card** can't be declined....because it just can't 😊'. This tweet has 2 replies, 10 retweets, and 99 likes.
- A tweet from Wirex (@wirexapp) dated Jan 10: 'WAVES @wavesplatform joins #Bitcoin, #Litecoin, #XRP and #Ethereum meaning that Wirex users in the EEA can now buy, store, convert and spend #WAVES with their Wirex **Visa card** 🇧🇪'. This tweet has 0 replies, 0 retweets, and 0 likes.

Relieve the dissatisfied

After performing sentiment analysis, we obtain a list of unhappy competitor company customers.

This technique can be extended to other platforms where we can find customer reviews!

Millenials love to interact with Chatbots

- Millenials value connection.
- They'd rather be talking to a bot that responds to them than typing in queries and finding answers.
- According to CARAVAN statistics, **60% of the millennials use chatbots 70% of those report positive experiences, and of the millennials who have not used them, more than half say they are interested in using them.**
- Millennials value speed and efficiency. Chatbot provides it all.

Our Supercool AMEX Bot

How does it help?

A master solution to all customer queries within seconds.

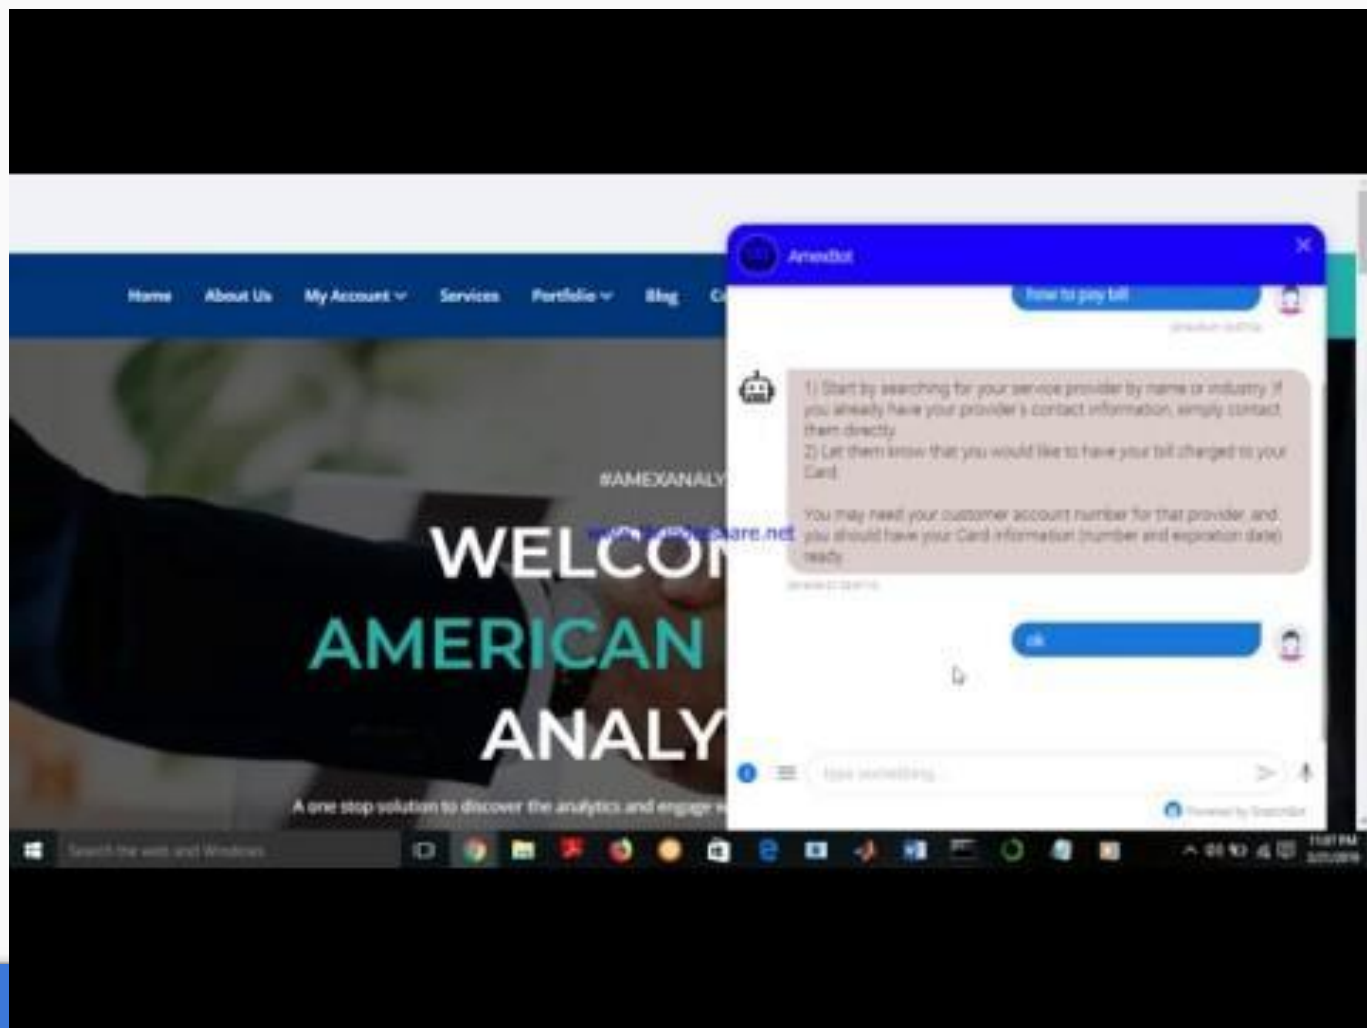

How can we use it to our benefit?

The chat history will help in monitoring potential customer behaviour.

What is the customer asking for? Is there anything that they need that we are not currently providing?

Also it will assist in identifying those sectors which customers value more.

Millennials are all about Social Media

- They value experiences.
- GenY loves social media!
- **“88% of Millennials have a Facebook account, and over half of them use the platform regularly.” - www.laveh.com**

Social Media Strategy?

A Campaign!

- We propose to have a campaign called **#ExpresswithAMEX** where people share video testimonials of their credit card experience and avail benefits.
- **The carriers of the campaign** would be **“influencers”**, customers identified through our database that have a high following (say, more than 1K) on social media platforms.

How does it help?

Automatically contact the “influencers” via email/instagram DMs/message to participate in the campaign and spread the word in return for points and rewards

After the campaign commences, it would be possible to assign an **influencer score** to each participant in the campaign by looking at their outreach (a person reaching out to 100 people has a score of 0.1 and another that reaches out to 1000 would get a score of 1 or 100% outreach) and reward them benefits accordingly.

Millennials are focused on saving!

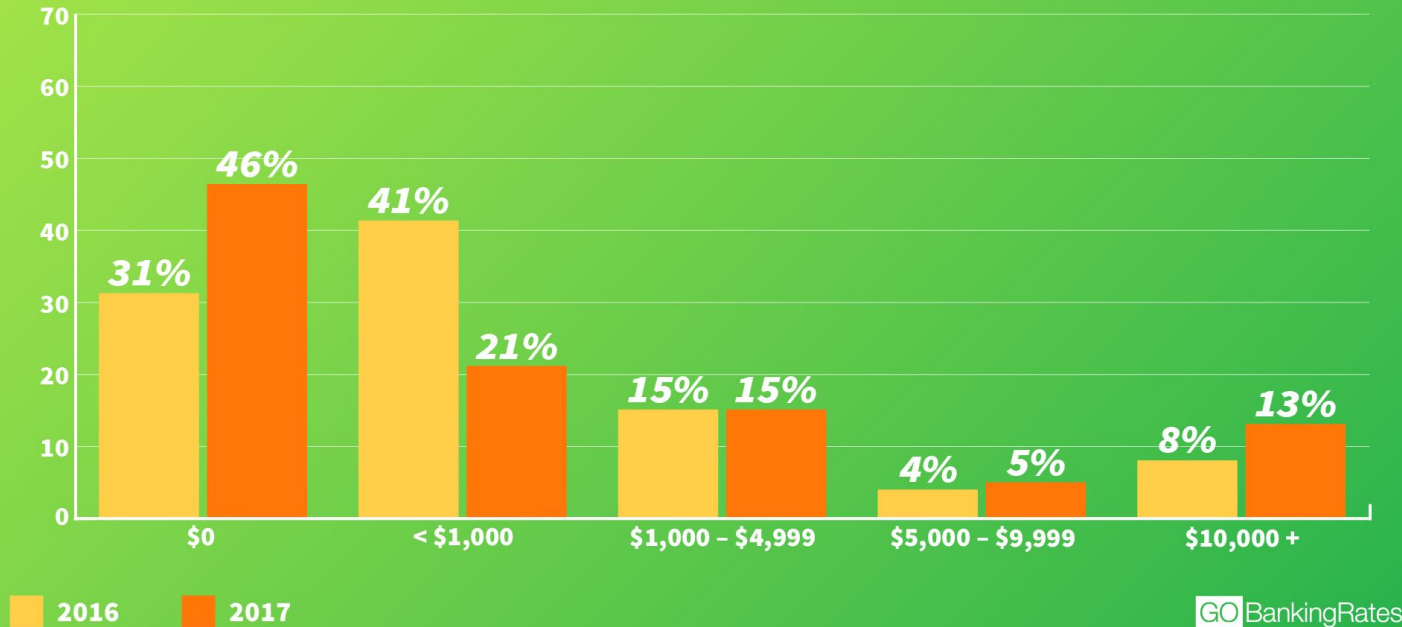

- A 2018 **Bank of America** survey found that **1 in 6 millennials** — which BoA defined as those **between age 23 and 37** — now have **\$100,000 or more in savings**.
- That's impressive!
- But that stat doesn't tell the whole story!
- While some millennials are increasingly proving to be savvy savers, many other young people are not making progress at holding onto their cash.

Here are a few charts

How much money do you have
saved in your savings account?

YOUNG MILLENNIALS (18-24)

How much money do you have
saved in your savings account?

OLDER MILLENNIALS (25-34)

IDEA!

Personalized Wallet Management System

- We felt the need to design a **Personalized Wallet Management System** for AMEX ANALYTICS website.
- The AMEX card holder will be able to keep track of his/her payments.
- The AMEX card holder can form a wallet where he/she can make sections for various purchases and assign budgets to them. This can also be edited too.
- The customer can then assign budgets for each section.
- After a payment has been using AMEX card, the amount/money will be subtracted automatically from the balance amount.

IDEA!

Personalized Wallet Management System

- For example, the customer can form sections in the wallet like 'House Rent', 'Restaurants', 'Electricity', 'Clothing' etc.
- After a payment has been done using AMEX card, the amount/money will be subtracted automatically from the balance amount.
- For example, say a customer has assigned Rs: 5000 to clothing for a month. After a transaction of Rs 1500 at H&M, the amount will be deducted automatically from the balance amount.

In the next slides, we present the screenshots from the prototype of the personalised wallet management system.

AMEX ANALYTICS PERSONALISED WALLET

AMEX ANALYTICS provides you with a personalised wallet management system.

Millennials are eager and focused on saving money. They love flexible plans. This is a platform where they can keep monthly budgets/constraints for their own requirements and purchases. In this way they can keep track of their purchases and make sure they are saving money. The constraints can also be edited any time.

Continuing the Good Work

RETENTION OF CUSTOMERS BY KNOWING THEIR LIKES:

Social networks are an extraordinarily important part of Millennials' digital lives, in part because social networks have become much more than a way to connect about personal matters. **Social media engages them with different opinion and views.**

We have tried to analyse what **#amexcard** users likings by extracting the positive keywords from their tweets including both positive and negative reviews.

APPROACH:

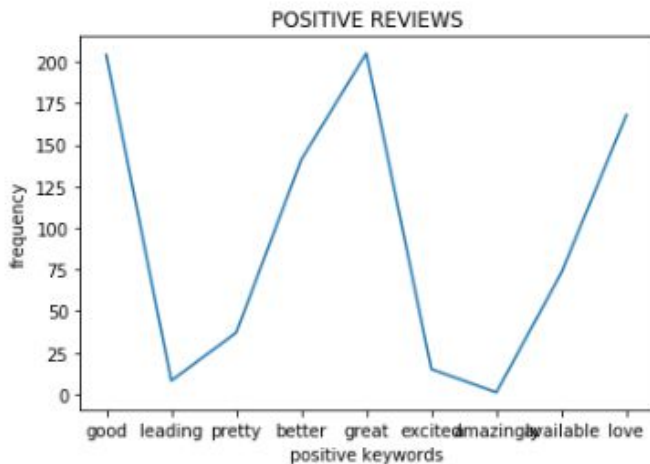

Scraping the data from social media like twitter and analysing them for positive keywords along with their frequency.

Analysing the satisfaction content of a particular feature among the users by measuring its frequency in our list of keywords.

THE PLAN? *Keep them happy!*

INCREASE CUSTOMER BASE WHILE RETAINING THE PREVIOUS CUSTOMERS:

Try not to change the features which makes the customers happy. The graph shows the satisfaction metric of most commonly used positive keywords.

You don't wanna lose them! Do you?

- The *New York Times* pointed out that in **2016 the number of Amex cards in use fell 18 percent, while Amex revenue in 2016 was down more than \$2 billion from two years earlier.**
- It is important to catch a hold of those customers who are on the verge of switching or withdrawing from AmEX services. Also, why are they doing so?

Make them Stay

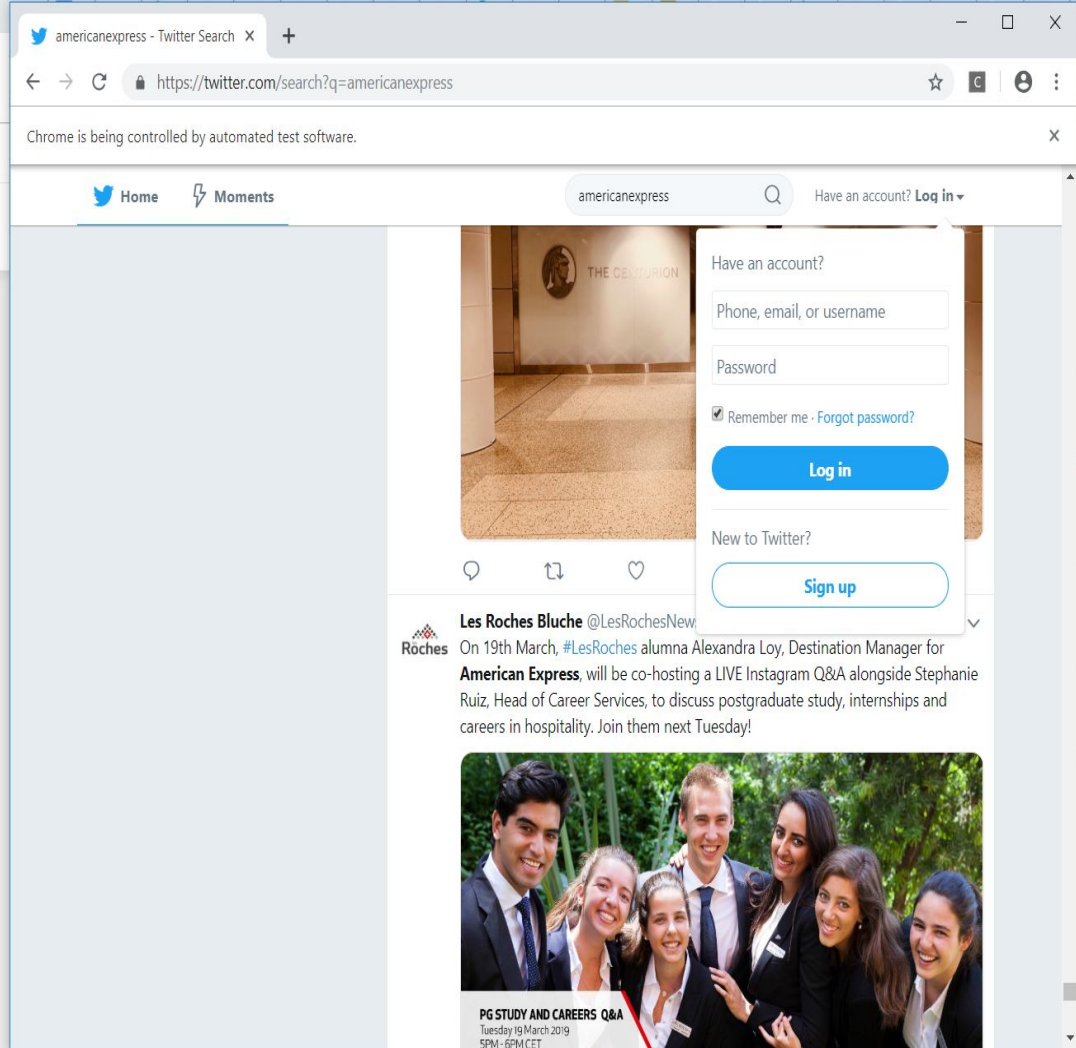

- We aim to acquire data regarding **customers** who have been **disappointed** in the services of the company.
- Like we did for competitor companies, it's important to recognise the points of dismay with AmEX's products and services.
- We did this by scraping tweets for the query 'amex' as displayed in the following slide and successively applying sentiment analysis to categorise them as positive/negative.

SCRAPE

Query:
'americanexpress'

scrape the data
and store it in a
dataframe.

Don't let them go

After performing sentiment analysis and segregation, we obtain a list of **unhappy customers** likely to leave. Address their grievances and concerns.
